

Wednesday 10/29/25 meeting notes

- Starting properly on code and determining the base for the classes
- We determined what stats we are having the user input: pitcher_id, game_date, innings_pitched, batters_faced, strikeouts, walks, home_runs, hits, earned_runs, pitches. For each throw we are tracking the throw, if it was a hit, ball, or strike, the zone, speed of the pitch, type of thrown ball
- From there the different throws at determined if there is a strikeout, a walk, a hit that led to play, or a foul
- For the game tracking it would have the summarization of the per throw stats along with the pitcher id, game's date, innings pitched, batters faced, and earned runs
- Talked more about the structure of the code. In terms of a database we are going with json files to store our code
- Talked about the class and things that go into being a pitcher and coach. The account name, team member id, Date of birth, team name,

Wednesday 11/5/25 meeting notes

- worked on inputting data into JSON files
- worked on putting pitches into a session arraylist to hold the pitches thrown. Was able to create a new pitch and add it to a List. Then outputting stuff in main
- Talked about the GUI

Wednesday 11/12/25 meeting notes

- Worked on lab 11 and correcting our old UML diagrams to match the newer implementations.
- This week we are going to be working on totaling stats in the sessions
- Worked on the GUI's for all the pages besides the simple drawings for the lab

Wednesday 11/19/25 meeting notes

- In the code we need work on completing a session and storing it properly
- How to pull pitchers from the database, some code with how to do that
- Make a functional login without encryption

Tuesday 11/25/25 meeting notes

- worked on adding career stats to the table under the years
- talked about plans for getting ready for the presentation
- added a key below the table explaining the values
- Distributed tasks and priorities on what to work on first.

Monday 12/1/25 Meeting Notes

- Finishing the powerpoint presentation for tomorrow, scheduling a practice meeting for noon (before class)
- Last minute polish ideas for the program's live demonstration.
- Discussing finalization of DAO file saving, pushed back to be de-prioritized till after the presentation.
